

The acre intrusion Milestone plugin integrates with the Milestone VMS software to achieve an in-depth integration of the two systems.

The acre intrusion Milestone plugin allows users to trigger events such as alarms or status changes and to control acre intrusion systems within the Milestone system.

When installed, the plugin allows a 30-day trial for up to two panels and will allow the display of areas, zones, doors and outputs from the acre intrusion system. The plugin uses an IP-based, bi-directional and 256 bit AES with CBC encrypted FlexC® to communicate with the acre intrusion control panel.

Acre is offering 2 license packages starting with a 5 acre intrusion panel license up to a 20 acre intrusion panel license. The license also provides customers with one year of support and updates, additional support and maintenance packages can be purchased as individual add-on packages.

Test version

Download a free trial version of acre intrusion Milestone Plugin (2 panels - 30-day free trial). Please note that this trial period applies for the acre intrusion Plugin only, a separate license for the Milestone VMS Software may be required. [Download link](#) (Includes legacy Milestone versions support).

Key features

- Supports up to 20 acre intrusion controllers
- Plug and play installation
- Alarm Management
- Event-based Rule Engine
- 256 bit AES with CBC encrypted communication

Features & Benefits

- **Alarm Management**

The operator will have the ability to control areas set and unsetting the system from within the Milestone front end. The operator will also be able to control zones, outputs and doors on the acre intrusion system. The system can be configured so that the graphical interface can be used to control all of these elements

- **Events Triggering (bi-directional)**

The plugin will allow you to trigger events on the milestone system based on events from the acre intrusion system. You will also be able to trigger actions on the acre intrusion based on events the milestone system. Should the milestone system detect a fault it can now trigger the acre intrusion to perform an action.

- **Secure IP Communications**

Using the acre intrusion FlexC® communications protocol the installer uses a common setup to configure the communications and has the peace of mind that communications are secure and reliable.
